

Run Your Cloud Like a Business

Achieve accurate cloud financials and operational excellence throughout your cloud journey.

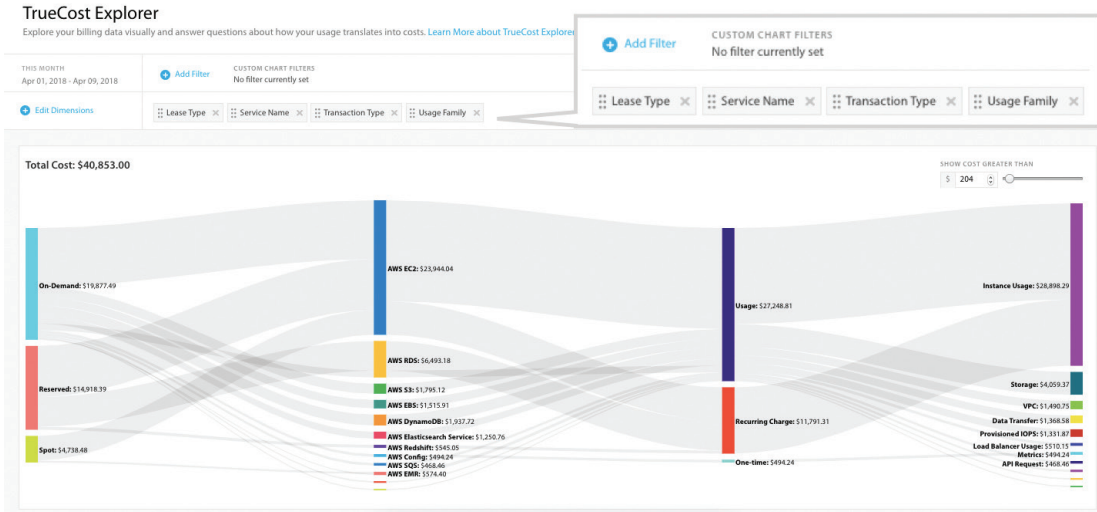

Cloud success requires enterprises to run their cloud infrastructure with the same precision and accuracy as the rest of their business – with detailed visibility, chargeback and governance. However, determining the True Cost™ of a cloud investment at-scale and in a timely manner is incredibly hard to do because it is a data science problem with billions of constantly changing data points. Spreadsheets, homegrown tools, provider and other third-party tools don't scale, leave out crucial details and can be inaccurate. Cloudability is the trusted source of truth for technical, business and financial stakeholders at enterprises that are migrating to cloud as well as at the most advanced cloud adopters.

Cloudability True Cost Platform Delivers:

- » Accurate, timely and precise data across every VM, container and serverless workload, application, department and user
- » True Cost that incorporates discounts, credits, custom charges and amortization
- » Accurate and proactive insights produced with machine learning and data science modeling applied to detailed cohort data sets with no loss of granularity
- » Comprehensive recommendations for accurately optimizing cloud infrastructure and spend

The exact slice of cloud spend data you need at your fingertips.

“Having a tool like Cloudability to validate our cloud approach and get quick feedback is a huge win.”

—DAREK GAJEWSKI,
Sr. Infrastructure Analyst,
Ancestry

“With Cloudability, we are able to get the most important information into the right hands.”

—MIKE FULLER,
Principal Systems
Engineer, Atlassian

Backed by an enterprise-scale data and analytics engine, our cloud management solutions will grow with your business and adapt to the challenges of tomorrow. Our platform provides:

Successful Migration

Align business and technical goals into a cloud strategy, map workloads to the right cloud infrastructure, forecast spend and set budgets.

Unprecedented Visibility

Give every stakeholder the exact insights they need to proactively manage their resources. Create role-based dashboards and reports.

Full Allocation and Chargeback

Account for all resources across clouds and accurately allocate spend for chargebacks. Track cost in real time including discounts, credits, custom charges and amortization.

Infrastructure Optimization

Identify unused resources and shut them down, rightsize underutilized resources, get the best rates through reserved and spot instances.

Enterprise-grade Governance

Implement governance policies aligned with your strategy so you have accountability and compliance without hindering team empowerment and agility.

Disruptive Transformation

Enable a cloud-first culture that encourages teams to take advantage of more cloud-native services and focus the business on disruptive unit cost economics.

true[X]

“We were able to reduce our cloud spend by 70% using Cloudability. Whereas reserved instance planning previously required a tedious Excel spreadsheet analysis and some guesswork, now it takes only a few minutes.”
